Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 02 September 2005.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.

DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-3 are rejected under 35 U.S.C. 102(b) as being anticipated by Yamazaki et al (US. 6,302,910).

Yamazaki discloses a sliding contact seal structure, having a shaft member having a sliding contact surface that comes into contact with a seal member (41) formed from urethane or fluoro-resin or PTFE or polyurethane or like materials. The sliding contact surface is defined to have a surface energy of 50 dyne/cm or less for contact with the seal member (the shaft is made of stainless steel and is coated with a coating of nickel and polytetrafluoroethylene). The sum of the surface energy of the seal member and the surface energy of the shaft member is 95 dyne/cm or less (this is the case since the seal is made of polytetrafluoroethylene and the shaft has a coating of nickel and polytetrafluoroethylene).

The limitations in claim 3 are considered to be product by process limitations and are given little patentable weight in an apparatus claim (the film forming material formed by any one of chemical deposition, plasma CVD, physical vapor deposition, vacuum deposition, and sputtering).

Response to Arguments

3. Applicant's arguments with respect to claims 1-3 have been considered but are moot in view of the new ground(s) of rejection.

Furthermore it is pointed out that the reference of Shrontz reads on the claims 1-3. The reference call for a seal made of SP1 Garlock, which is a material that applicant's seal is made of. Furthermore evidence is pointed out by JP 56016698A that chromium oxide has a 36 dyne/cm.

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Turner, Jr. et al. and JP 56016698A.
